

Process for producing cast-stone walls, and building elements for this purpose

Patent number: DE3507531
Publication date: 1986-09-04
Inventor:
Applicant: KASAMENTBAU GMBH & CO (DE)
Classification:
- international: E04B2/06; E04B2/02
- european: E04B2/06
Application number: DE19853507531 19850304
Priority number(s): DE19853507531 19850304

Abstract of DE3507531

A process for producing cast-stone walls, in which process the walls are assembled in a time-saving manner from prefabricated wall parts, avoids difficulties with respect to tolerances when placing the wall parts against one another and one on top of the other in that the wall parts have depressions on edge surfaces in order to receive spacers, with the result that the wall parts are arranged such that they are aligned to a unit spacing from the depressions, tolerances being compensated for in remaining joints. The joints can be subsequently plugged with mortar or stopped with filler in a known manner. The precision of this assembly can be improved by the wall parts being produced by individual stones being adhesively bonded with foam, it being possible for the stones to rest against one another in a pressure-resistant manner. The precision of assembly also permits the wall parts to be provided with a smooth surface which is ready for wallpapering or painting.
